

Avast Anti virus problem. DFGraph.dll false positive.

DFgraph needs to be added to the allowed exclusions list in the anti virus program as it is not a virus

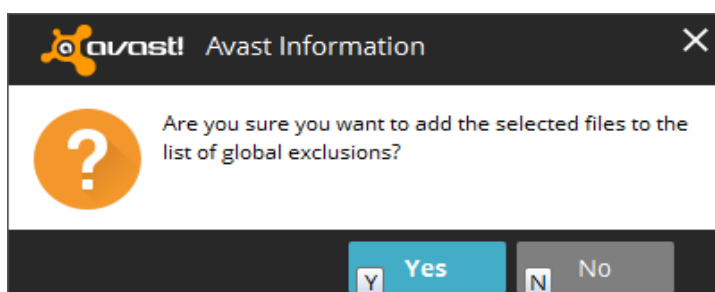

1. Launch Avast and select Quarantine.

2. Right click on DFGRAPH.DLL, and select Restore and add to exclusions

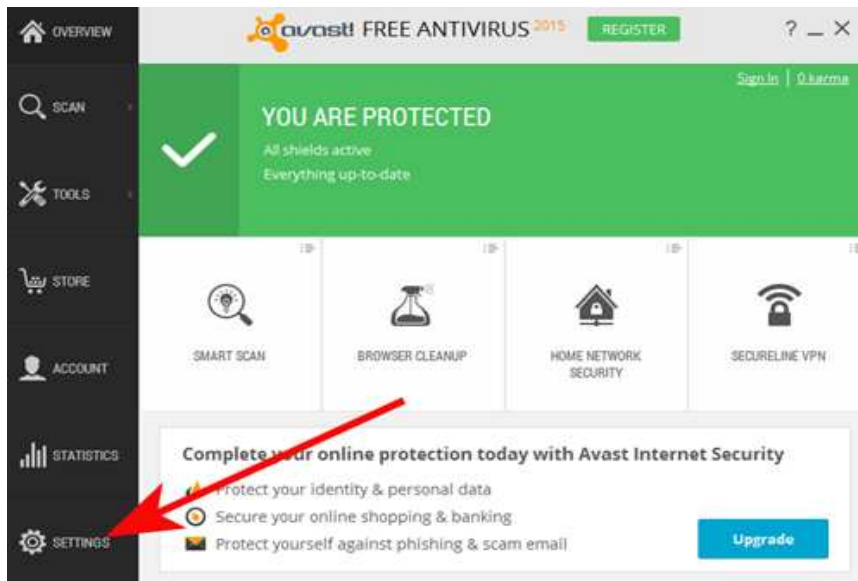

3. Confirm the action, and allow Avast to run when prompted by Windows

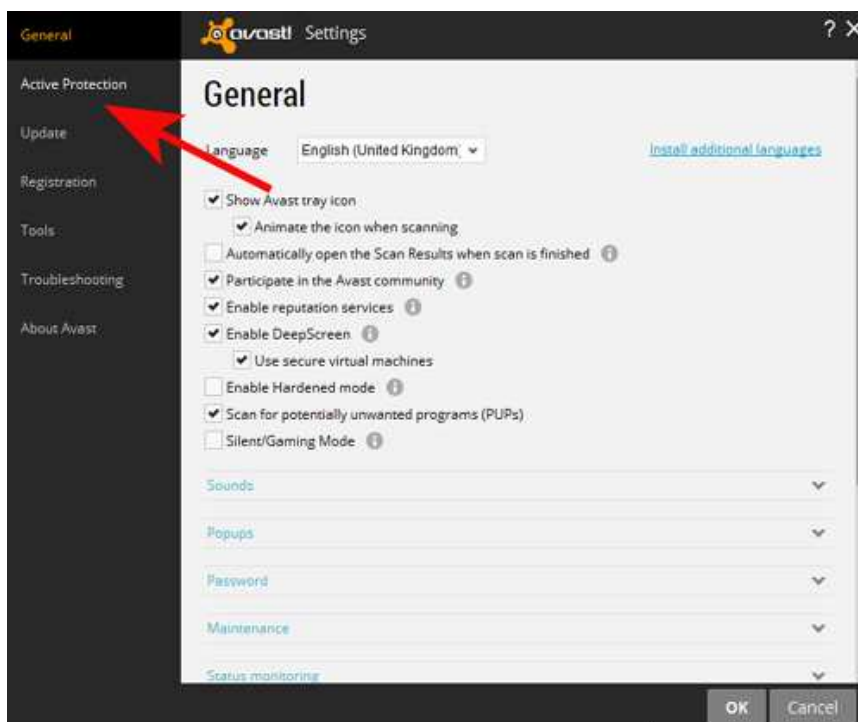

Confirm the settings.

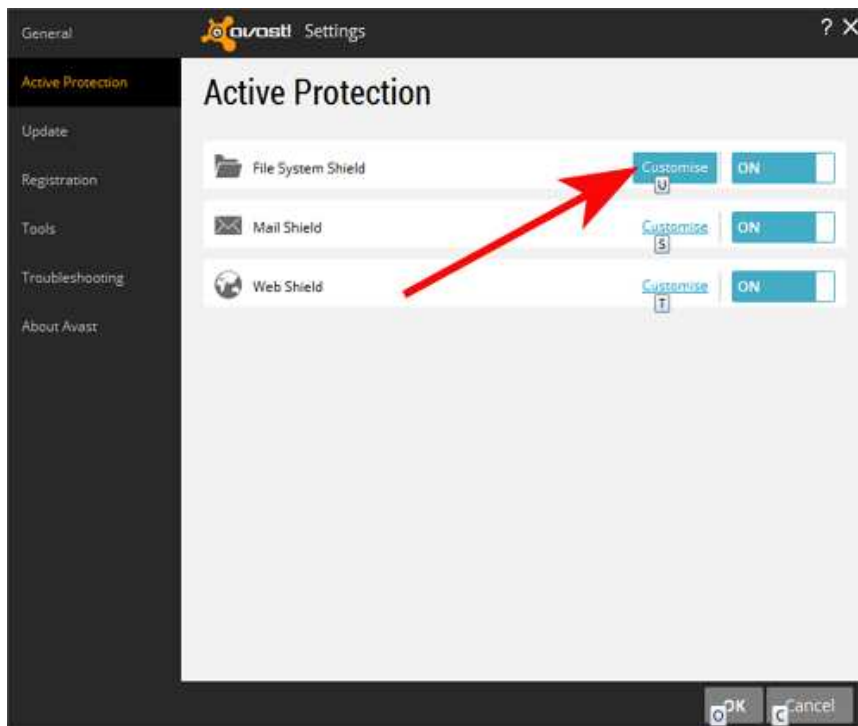

4. To confirm addition to exclusions list. Select the settings

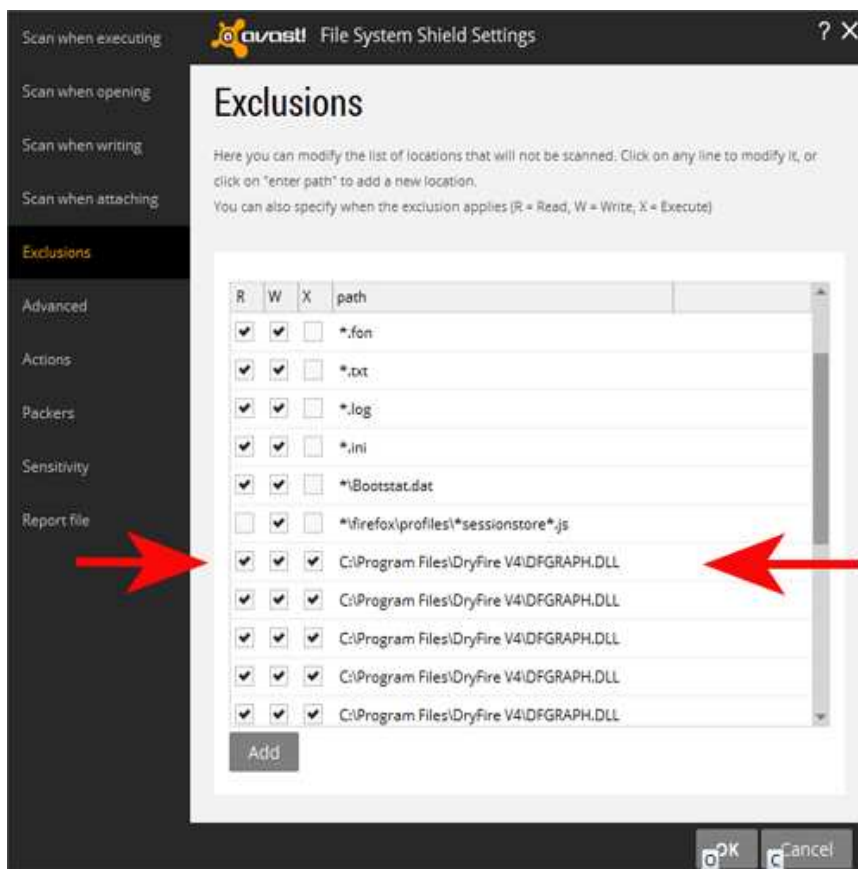

5. Select Active protection

6. Select the customise beside the File System Shield

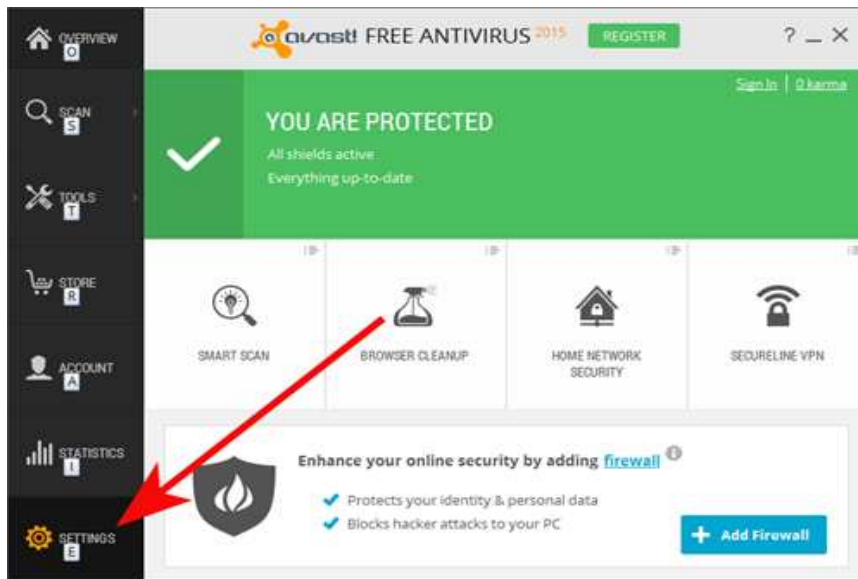

7. DFGRAPH.DLL should now be listed in the exclusions

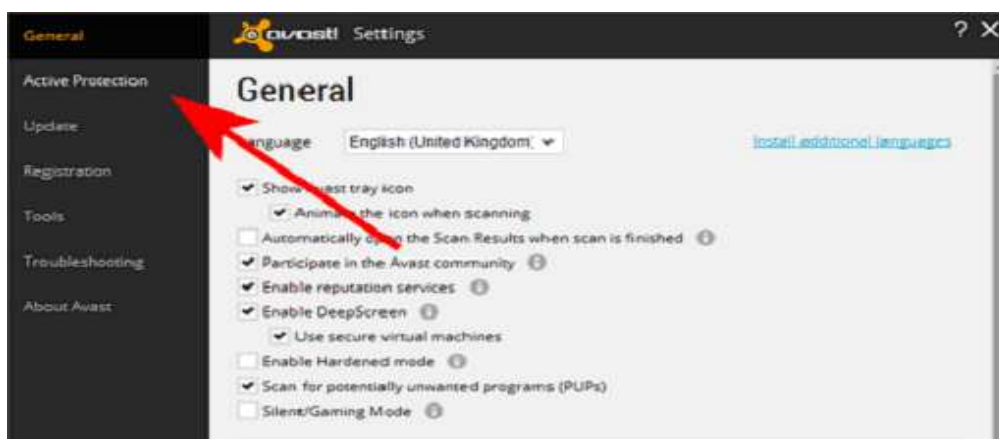

Downloading updates

To allow the DryFire program to download with Avast you need to disable the Web shield.

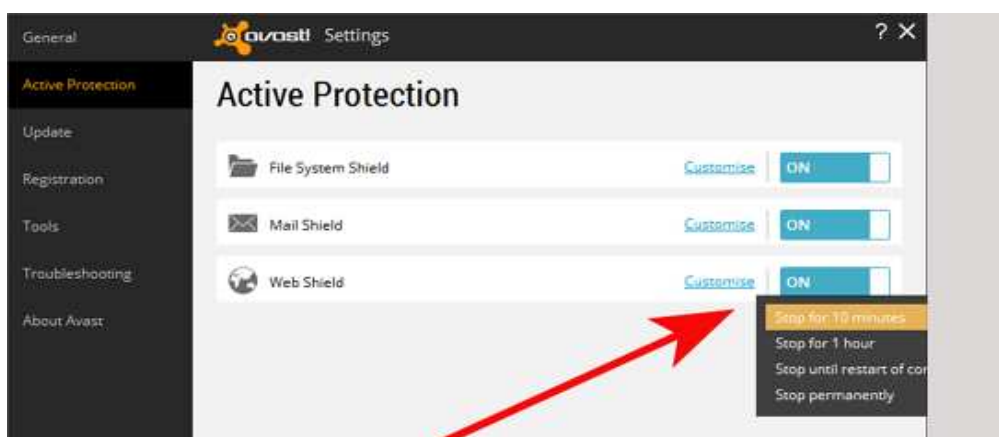

1. Go to Settings

2. Select Active protection

3. Select to stop Web shield for a period of time

You can now download the DryFire updater via website or check for update.
